

ABSTRACTINDOLE AND INDOLINE DERIVATIVES AS 5-HT₆ SELECTIVE
LIGANDS

5

Three classes of indole and indoline derivatives are disclosed as ligands selective for the 5-HT₆ receptors, and hence of value in the treatment or prevention of CNS disorders, including Alzheimer's disease, Parkinson's disease, schizophrenia, depression and anxiety. A particular class, 1-substituted-4-(ω -*N,N*-dialkyl-aminoalkyl)indoles, are claimed as novel compounds.
